

QUICK START INSTRUCTIONS

1. Plug unit into a grounded outlet.
2. Close all outside doors and windows of the area to be treated.
3. If the space to be treated has a central heating or cooling system turn the fan setting to "On" to gently circulate the air while the space is being treated.
4. Make certain all occupants and pets have been removed.
5. Set ozone level at "Medium" to "High" depending on the level of odors and amount of time for treatment.
6. Set timer to desired treatment time and then exit the space during treatment.
7. Upon returning to pick up the unit, make sure the unit is off.
8. Allow at least one hour after treatment time is finished before re-occupying the space.

Hold Position: For more severe odor problems, turn the timer dial to the left to the "Hold" position (In the "Hold" position the unit will stay on indefinitely). Upon return, be sure to turn the timer to the "Off" position and ventilate the area. Do not reoccupy until sanitizing smell is gone.

Warning: For use in unoccupied spaces only! Excess ozone concentrations can cause mucous membrane and respiratory irritation. If you detect the sanitizing smell when you walk into the room, be sure to turn the timer to the "Off" position immediately and ventilate area. Do not reoccupy until sanitizing smell is gone.
